I just talked to Congressman Babin. He is in Houston touring area. Requested update on air quality. Talked about ASPECT, TAGA and company air monitoring and their mobile unit. No unacceptable chemical levels to date however everyone should stay out of the smoke/soot. Fire out so air levels may increase due to warm temps and material no longer being consumed by fire. They are trying to suppress vapors. Asked about compliance and I told him that I had not heard about compliance problems. However 2014 RMP inspection found some minor deficiencies resulting in a \$3,300 payment to resolve. Asked about cause – stated too early to tell and that the investigation would most likely occur after the incident was under control. He reported no smoke or steam from the plant. I asked him to let us know if he notice increase in odors now that the fire was out. He seemed satisfied and thank us for our efforts.
